

MONKEYPATCHED

CognitiveOS

Most agent systems build agents that can call tools. Monkeypatched builds the operating system that lets autonomous actors exist inside a changing world.

— Prashun Javeri, Founder

The Operating System for the Physical World

Why an Operating System?

Most agents are built on

Prompt → LLM → Tool Call → Result.

That works fine when the world holds still. It breaks the moment an agent sees milk in stock, plans the purchase, and by the time it executes, the milk is gone — and so is your dad who left to get milk.

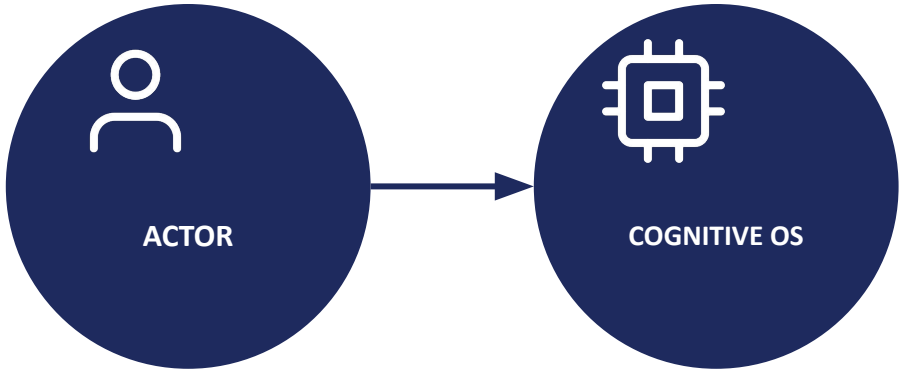

The model didn't reason badly. Reality just moved.

CognitiveOS enables autonomous entities to interact with the world in a state-aware way — continuously grounding decisions in changing world state, updating local and global state through action, and learning from the results.

LLMs gave AI intelligence

Agents gave AI actions

World models gave AI context

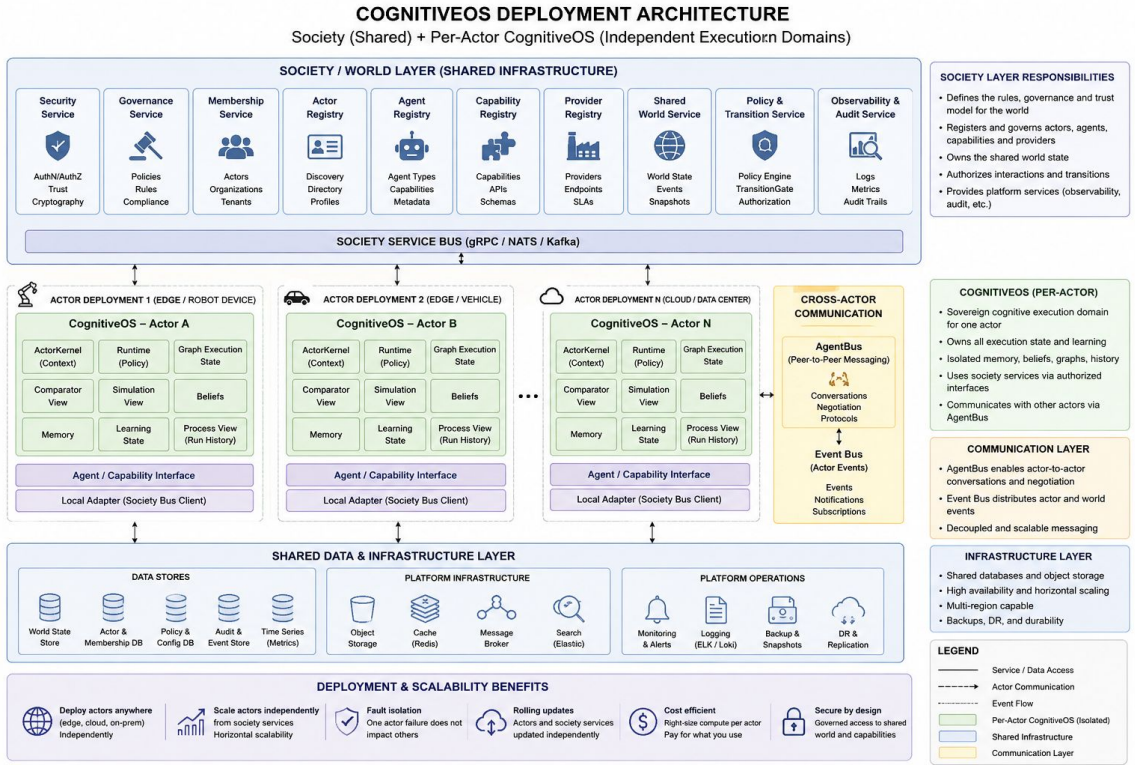

CognitiveOS gives autonomous entities the ability to exist in an ever-changing world.

Why an Operating System?

CognitiveOS	Traditional Agentic Frameworks
Runtime creates the graph	Developer defines the graph
Execution order is derived from the request	Execution order is predefined
Branches emerge from current context & state	Branches are designed beforehand
Capabilities are discovered and selected dynamically	Tools/agents are wired into the workflow
LLM determines what should happen	LLM fills in the workflow
Designed for changing real-world situations	Best for repeatable workflows

What is a Cognitive Operating System?

Isolation — each actor owns its cognition and execution state

Scalability — actors scale independently of Society services

Deployability — edge, robot, vehicle, cloud, or on-prem

Fault Isolation — one actor can fail without taking down others

Security — shared resources are accessed through governed interfaces

Efficiency — compute is right-sized per actor

Built and Tested

Cognitive Core	95%
World Model & Grounding	95%
Execution Runtime	95%
Domain Isolation	95%
Failure and Recovery	95%
Human in Loop	95%
Persistence & Checkpointing	95%
Multi-Agent Runtime	95%
Learning & Preferences	95%

Policy and Governance	95%
Security	95%
Trust	90%
Society and Membership	90%
Agent Framework Integration	95%
Existing API / AI Integration	90%
Edge and Cloud Deployment	85%
Observability	95%
Admin Console	85%

Unit tests	2400
Scenario tests	428
Security tests	310
E2E tests	111
Benchmark tests	103
Integration tests	85
Affiliation tests	61
Ontology tests	29
Fault injection tests	10

Pricing Tiers

COGNITIVEOS BASIC

Open Source

Free Forever

COGNITIVEOS DEVELOPER

Up to 50 Actors

Rs 1,500–2,500 / actor / month

COGNITIVEOS PROFESSIONAL

Up to 1,000 Actors

Rs 1,250–2,250 / actor / month

COGNITIVEOS TEAM

Up to 5,000 Actors

Rs 1,000–2,000 / actor / month

COGNITIVEOS BUSINESS

Up to 10,000 Actors

Rs 900–1,900 / actor / month

COGNITIVEOS ENTERPRISE

Custom Pricing

Additional Revenue Streams

LLM USAGE

As per consumption

ENTERPRISE SUPPORT

Rs 2.5L–10L / month

FORWARD DEPLOYED ENGINEERING

AGENT USAGE

As per consumption

The AI Lifecycle: Problem to Production

1

Problem Definition

Define the “why.”
User needs + measurable business objectives.

2

Data Collection

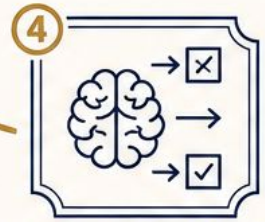

Gather, clean, and label data.
Quality in = quality out.

3

Feature Engineering

Select the measurable attributes the model will learn from.

4

Train & Evaluate

Navigate the overfitting/underfitting balance.

5

Deployment

Move from lab to live.
A/B test with real users.

6

Monitor & Maintain

Watch for model drift.
Plan for retraining.

The AI Lifecycle: Problem to Production

Production Security

- Identity & authorization
- Policy enforcement
- Consent & delegation
- Revocation
- Security audit

Society & World Model

- Actor registry
- Membership & trust
- Shared world state
- Cross-actor coordination
- Governance

Production Runtime

- Actor isolation
- Deployment architecture
- Observability
- Auditability
- Production integration

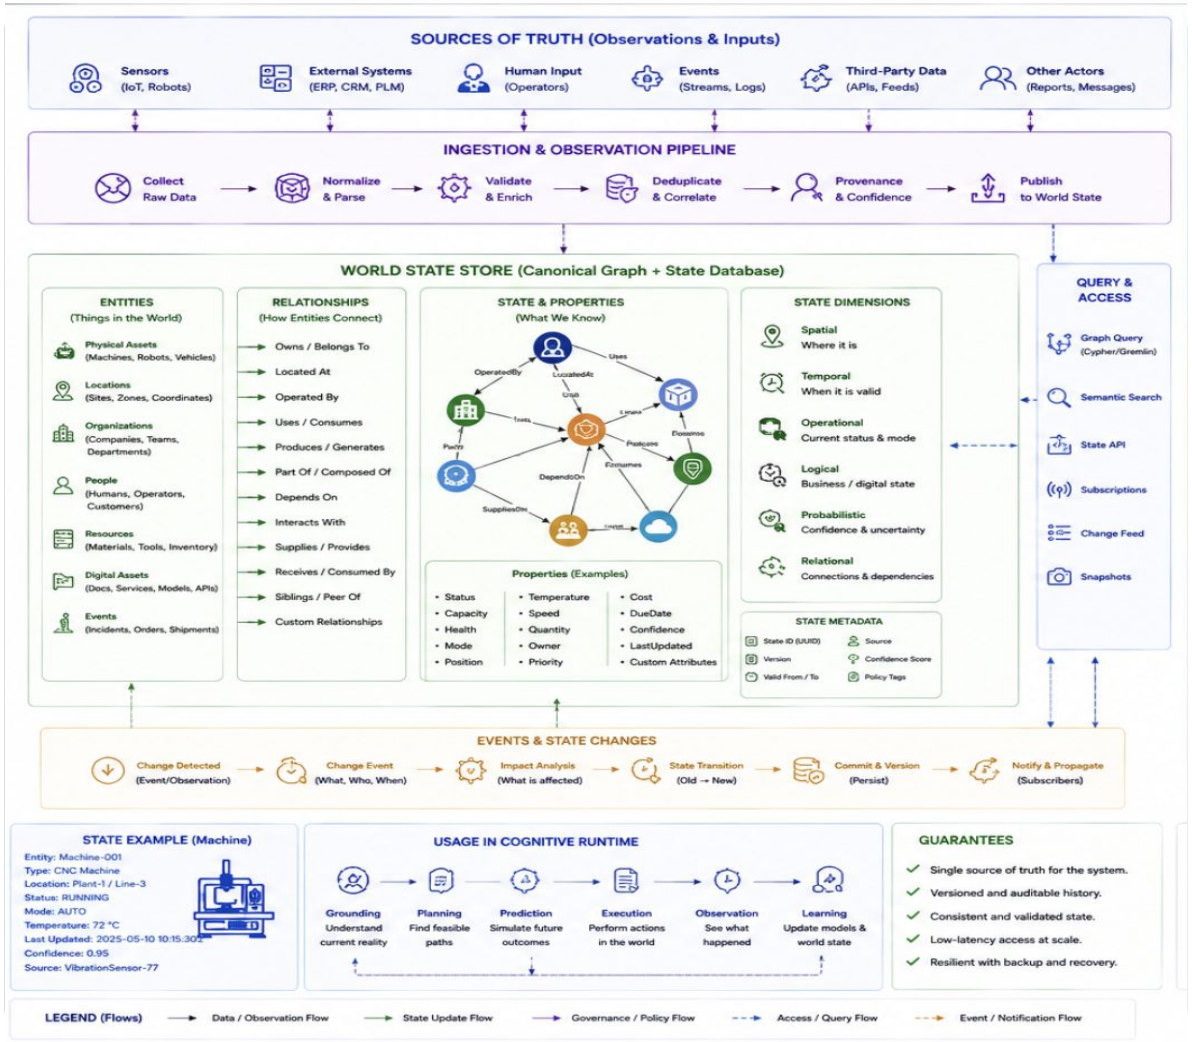

Real Use Case

- One customer-defined autonomous workflow
- Real systems and capabilities
- Real execution
- Real-world state changes
- Measured results

Priced At

Rs 10L Flat

5–10 Enterprises Only
